

Hornet's Nest Drain Inlet Filter

Sediment / Erosion Control Done Right

The *Hornet's Nest Drain Inlet Filter* is a unique, under-grate storm drain filter. The oversized base allows the filter to be used with a variety of size and shape drain inlets. Simply insert the filter, place the grate into place and trim the excess material for a custom fit and clean appearance. The yellow webbing secures the filter to the grate and doubles as lifting straps to quickly and easily remove the filter, grate and all, for simple cleaning. The sediment collection cone has 4 overflow portals to ease congestion during heavy storm events.

• Available as an option is a replaceable, tethered oil absorbant pouch.

Product Specifications

- | | |
